JSON API response format

```
response()->json([

    'data'      => [],
    'status'    => 'success|fail|error',
    'code'      => 200,
    'message'   => 'message',
], 200);
```

Type	Description	Required Keys	Optional Keys
Success	All went well, and (usually) some data was returned.	status, data	message
fail	There was a problem with the data submitted, or some pre-condition of the API call wasn't satisfied	status, data	message
error	An error occurred in processing the request, i.e. an exception was thrown	status, message	data, code
